MONTHLY INFRA COST

Scheduling a group meeting is broken

"Does Tuesday work for anyone?"

47-message email threads with no resolution.
Someone always misses a reply.

Doodle requires an account. Calendly is overkill.

Friction kills coordination. No one wants to sign up for a simple meetup.

When2Meet hasn't changed since 2004

No mobile. No real-time updates. No ranked best times. Built before the iPhone.

SARAH

Hey team — when can everyone meet next week?

DAVID

Tuesday works for me, except the morning

MAYA

Not Tuesday — can we do Wednesday?

TOM

Wednesday afternoon only, I have a call in the morning

SARAH

Ugh. Anyone free Thursday? 🙄

THE SOLUTION

Share a link. Mark availability. Done.

- ✓ **No accounts. No confirmations. No friction.**

Anyone can join just by opening a link — no app, no signup, no waiting.

- ✓ **Real-time sync — everyone's availability appears live.**

Powered by Firebase Firestore. As participants mark their times, everyone sees it update instantly.

- ✓ **The app ranks the best times automatically.**

No manual scanning. WhenFree surfaces the top slots by how many people are free.

Seed Round · 2026

"No accounts, no 47-message threads. Just a link. Just answers."

How WhenFree works

STEP 1

Create an event

Name it, pick your dates and time range. Takes 30 seconds.

STEP 2

Share the link

Send via WhatsApp, email, or copy the link. Participants join instantly — no account needed.

STEP 3

Everyone marks their free times

Click or drag on the availability grid. Updates appear live for all participants.

STEP 4

WhenFree finds the best time

Best slots ranked by availability count. Add to Google Calendar or download .ics.

MARKET OPPORTUNITY

Every meeting starts with "when can everyone meet?"

TAM

\$2B+

Global group scheduling &
meeting coordination market

SAM

\$400M

SMBs, remote teams, schools,
and community organizations

BEACHHEAD

IL IL

Hebrew-first market —
completely underserved by all
major tools

Zero-competition niche: No serious scheduling tool offers real Hebrew/RTL support. WhenFree owns this by default — reaching 9M+ Hebrew speakers in Israel plus a global diaspora. French expansion (Canada, France, West Africa) follows the same playbook.

BUSINESS MODEL

Free to use. Built to grow.

PHASE 1 — NOW

Free

100% free — user acquisition phase. Grow the base, establish brand, dominate the Israeli market.

\$0 / month

PHASE 2 — TEAMS

Freemium

Recurring meetings, admin dashboard, usage analytics, Slack & Google Workspace integration.

\$9 / team / month

PHASE 3 — SCALE

Enterprise + API

SSO/SAML, branded links, SLA support. API for embedding scheduling in other platforms.

Custom / per-event

Unit economics: Current infra cost $\approx$ \$0/month (Firebase + GAS under free tier). Sub-penny cost per event at scale.

The moment is right

Remote & hybrid work made this a daily problem for everyone

Group scheduling across timezones is no longer a once-a-month pain — it's every week, for every team.

Link-based sharing has proven product-market fit

Calendly's \$3B valuation showed the world loves zero-friction scheduling. WhenFree brings that model to group coordination.

IL

Israel's tech ecosystem has no Hebrew-first scheduling tool

Every Israeli team today uses English tools with poor UX and zero RTL support. WhenFree is built for them.

Built-in viral loop: Every event link shared to participants drives organic growth – zero paid acquisition cost.

TEAM

The founder

Avi Klayman

FOUNDER & ENGINEER

- Experienced businessman with a track record of innovative ideas and strong management skills
- Built WhenFree from zero — solo: full-stack, real-time Firestore backend, i18n engine, transactional email system
- Shipped Hebrew/RTL support and accessibility suite that no competitor has tackled
